

Cavity Trays new Continuity Closer improves build quality and insulating qualities in new homes and makes life easier for the site operatives.

It is one of several new designs released by Cavity Trays to raise standards in line with the carbon-footprint reductions that all new structures must meet to comply with the new Building Regulations.

Cavity Trays is based in Yeovil Somerset and is responsible for designing and manufacturing over 200 types of construction products.

It is the only company in its specialised field awarded European Technical Approval.

Its products are used in many countries within domestic, commercial and educational construction.

For further information on Cavity Trays Ltd products, please use the fast and efficient reader enquiry service on page 4.

Award Winning Product Blocks Heat-Loss Path

At the annual Housebuilder awards backed by NHBC, the Home Builders Federation and the New Homes Marketing Board, Cavity Trays Ltd received recognition for a new product that promotes better building and secured the Best Product Award.

How to integrate natural light with PV Panels

Simon Merrony Architects produced this carefully considered roof design by matching a bespoke neo™ rooflight with standard PV Panels.

The Rooflight Company supplied the neo™ rooflight, measuring 1.7m wide x 1m high, to perfectly complement the design scheme. It was also fitted with a concealed motor to allow electric actuation.

The result is an elegant solution while making the attic space habitable by providing natural light and ventilation.

To find out more about neo™ contact the Rooflight Company on 01993 833108.
